University of L'Aquila

DEPARTMENT OF ENGINEERING COMPUTER SCIENCE AND MATHEMATICS

Master degree in Software Engineering for Adaptive Systems

AUTOMATED APPROACHES TO ASSESS THE SIMILARITY OF OPEN SOURCE PROJECTS

Thesis Advisor:
Davide Di Ruscio

Thesis Co-Advisor:
Phuong T. Nguyen

Candidate:
Riccardo Rubei

Table of Contents

- Introduction
- CrossMiner
- Contribution
- Results
- Conclusion

Introduction

Challenges

- Searching for canditate components.
- Evaluating a set of retrieved canditate components to find the most suitable one.
- Adapting the selected components to fit the spicific requirements.

Introduction

CROSSMINER

- CROSSMINER aims at addressing such challenges by providing advanced techniques and tools supporting the identification and adoption of existing high-quality open source software components instead of implementing in-house propietary solutions with similar functionalities.

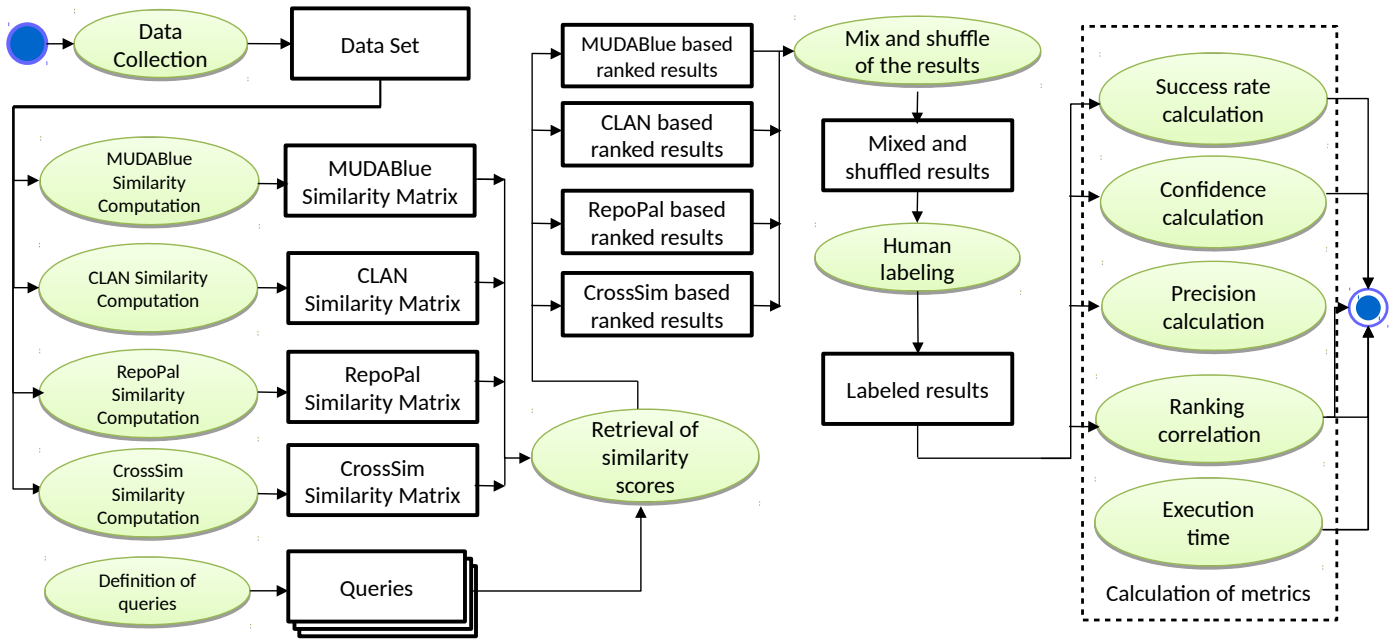
Evaluation

Evaluation Process



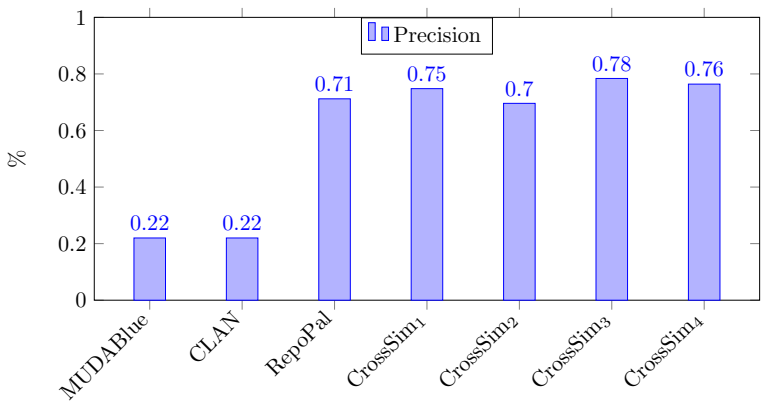
Evaluation

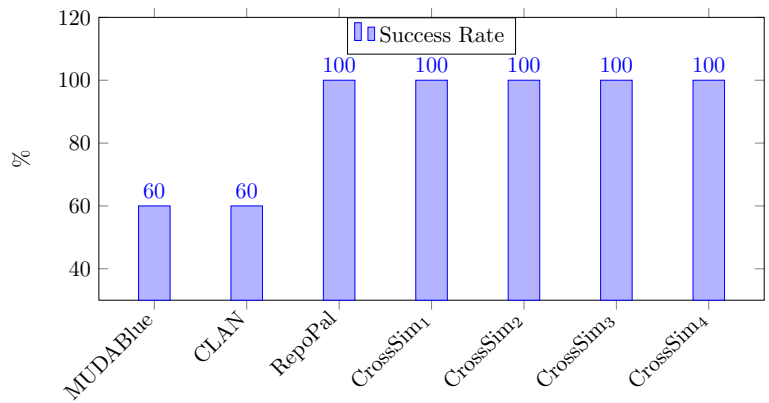
User Study

- User study: Human evaluators label the similarity between query and retrieved projects
- User study: 10 people involved with experience plus a double check
- Similarity scales: *Dissimilar*, *Neutral*, *Similar*, and *Highly Similar*
- Evaluation metrics: Success Rate, Confidence, Precision

Evaluation

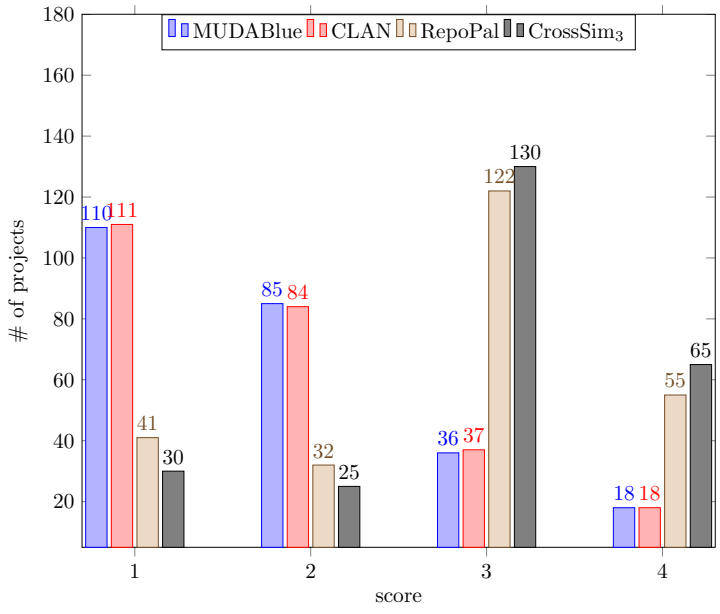
Results

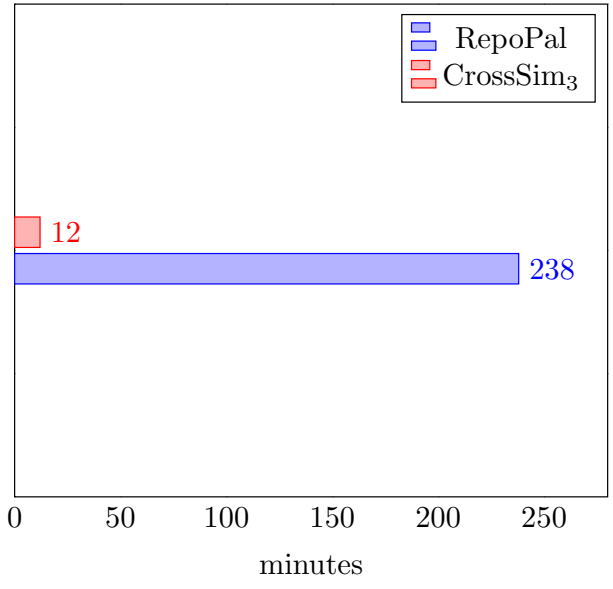




Evaluation

Results





Conclusion

What Has Been Done

- Implementation of two approaches
- Evaluation
- Confirmation of the goodness of CrossSim

Conclusion

What Else to be Done

- Still much to do
- Provide Api recommandation
- Provide Snippet of Code
